

Que.-35 How do you traverse through a dictionary object in python ?

There are multiple ways to iterate over a dictionary in Python.

1. Access key using the built-in `.keys()`
2. Access key without using a `key()`
3. Iterate through all values using `.values()`
4. Iterate through all key, and value pairs using `items()`
5. Access both key and value without using `items()`
6. Print items in Key-Value in pair.
